EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ursula B. Day on June 18, 2007.

The application has been amended as follows:

Art Unit: 1722

In the specification:

Immediately after the title, the following has been inserted:

--This application is a National Stage application of PCT/EP03/11197 filed on October 9, 2003, which claims foreign priority to German application 102 49 314.6 filed on October 22, 2002.--

Paragraph [0028] has been replaced with the following:

--[0028] A mixing element can also be configured as a cylinder of varying diameter, or in the shape of a cone or truncated cone or can have a rhomb-shaped or rectangular cross section, or can be configured as a straight or angled prism, or can be in the form of a curved- or helical line. As shown in FIG. 2, end portions of the mixing elements 9 terminate proximate a side wall of the cylinder.--

2. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or reasonably suggest, the device, as recited by instant claims 18-30, particularly including the mixing elements extending from the screw piston circumferentially and spaced apart in the area of the reduced piston diameter, the mixing elements including end portions from a porous material which are loaded with blowing agent, wherein the end portions of the mixing elements discharge the blowing agent into the plasticizing melt in the cylinder through the porous end portions into the defined locations proximate the metering zone, and wherein the end portions of the mixing elements terminate proximate the side wall of the cylinder. Taylor ('970) discloses porous material, but such porous material does not project into the plasticizing melt to define mixing elements having end portions proximate a cylinder. And WO 02/055282 and Ishibashi et al. ('704) do not reasonably suggest making mixing elements having end portions which extend proximate the cylinder, wherein the mixing elements are made with porous material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Leyson whose telephone number is (571) 272-5061. The examiner can normally be reached on M-F 9AM-5:30PM.
